Butchering

To Storage
Right on
the Farm

One of the distinct advantages of a Unico 30 cu. ft. Farm Freezer is that you can butcher at any time you need additional meat in storage. Of course, it is important that the carcass be chilled in temperatures from 32° - 36° F. Cooling requires from 24 to 36 hours. No aging period is necessary for pork. Pork should be frozen soon after slaughter.

Quick freezing should be done at -10° F. (below zero). Pork should not be stored beyond a 6 month period. Beef can be stored from 8 to 12 months. Stop in and see the many plus factors of this outstanding farm freezer.

**Choose Unico — The Freezer Designed
For Farm Use**

The Unico 30 cu. ft. farm freezer provides storage space for 1000 to 1200 pounds of farm fresh meats, fruits and vegetables. The Unico Farm Freezer has direct plate freezing — faster, more thorough freezing. The 30 cu. ft. cabinet will freeze from 50 to 75 pounds of food every 24 hours. Six inches of insulation means economy of operation. Stop in and see the many plus factors of this outstanding farm freezer.

Night Hog Feeding Shows Good Results

Experiment May Prove Useful During Summer

What is believed to have been the first experiment in night feeding of hogs indicates that this practice may prove highly practical, at least during the summer months.

The experiment was conducted by Robert C. Turner, a Henry, Ill., farmer, who produced an average gain of 92 pounds each on a herd of 107 Duroc hogs he had on his night-feeding program for 63 days.

To encourage his pigs to eat during the cool of the night when they were reluctant to eat during the heat of the summer days, Turner erected lights in his hog lot. He had a time clock control set to switch the lights on for two night feedings, from 10 to 11:30 p. m. and from 2:30 to 3 a. m. One pole with a single 150-watt bulb and another pole with two 150-watt bulbs lighted the self-feeders.

Turner fed a ration of ground oats and a pelleted milk product in the self-feeders, hand fed ear corn, and provided mineral, salt and good alfalfa pasture.

His 107 pigs, farrowed in late March and early April, weighed in for the test at 7,424 pounds, or an average of 69.38 pounds each. They weighed out at 17,270 pounds, or an average of 161.4 pounds each. This

meant a total gain of 9,846 pounds of pork, about 92 pounds per pig, or an average daily gain of about 1.45 pounds per pig.

The herd consumed a total of 27,069 pounds of feed at a cost of \$1,069.91. According to these figures Turner produced his gain at the rate of 275 pounds of feed for each 100 pounds of pork, or a feed cost of about \$1.70 per hundred weight.

The experiment used 148 kilowatt hours of electricity at a cost of \$7.40, or about seven cents per pig.

What are believed to be new records for economical and speedy pork production were established by Robert C. Turner of Henry, Ill., in his night hog-feeding experiment.
