## EDITORIAL

Longer hair is being worn by women and we predict the same thing will be popular among men considering the new price of hair cuts.

It certainly doesn't seem fair that an honest man will work hard forty hours to make what a holdup man can pick up in a few minutes.

We have a fellow here in town who would like to know just how they plant seedless oranges in Florida.

They tell us plaids will be worn quite extensively on the college campus this Fall. Many of those young men will wind up in khaki by Spring.

### A NATION AT WORK

The close of August found the employment level in the U. S. high, rising to 62,367,000 jobs. It wasn't over five years ago that the optimists dreamed of arriving at 60 million jobs. Of course the Korean war has already increased that level about one million. Today we are near 100 per cent capacity of production and consuming almost all of this as we go along. However, in achieving a high living level, we must meet the cost of war at the same high level. Sure, we don't like it, but as a certain man reminds us, in order to have your cake and eat it, you better bake two cakes.

### PLEASE PASS THE SODA

A labor strike in chemical factories which make soda ash for glass, causes a scarcity of both soda and glass. Usually there is enough cracked glass needed to melt down for additional glass manufacture, but not today. So, as a result, some cities are collecting broken bottles, just as happened during wartime. As for the soda, we could use it for an upset stomach caused by thinking of the ever-increasing power of labor unions to control our well-being. Their influence works against as well as for us, but the strike medium is not as clear as glass in its purpose. We take much of this with a pinch of salt, and follow up with a dose of soda.

### TOO MUCH WHEAT

Many of the farmers throughout the United States are at a loss to know what to do with this year's wheat crop. Around here the grain elevators are filled to the brim. Just recently several of those enormous oil tanks at the Marietta Depot were sold, moved and will be filled with grain.

In the state of Washington more than 6,000,000 bushels of wheat was piled on the ground out in the open. There it is exposed to the wind, sun and rain.

What a pity that we had sunshine and moisture to grow such an enormous crop and now much of it may go to waste when there are so many human beings without food.

### HEADACHE FOR DOCTORS

In Omaha a doctor received an average of \$450-a-day for taking X-rays for Army induction. In Milwaukee a doctor netted \$1125 a day for the same service. As the Army had disposed of its own equipment for this purpose, as surplus stock at the end of the war, it now depends on doctors in private practice. The government sets the rates or accepts the bids of the doctors, so the expensive result is their fault. But, the medical profession is under-fire these days and are fighting against socialized medicine. The AMA spends a fund collected to show its evils, to sell the public the idea that doctors aren't profiteering. Well, this business of \$450 and \$1125 a-day profit, isn't going to help the doctor's cause.

### OUT OF ORDER, HARRY

Voices and typesetting machines have been assailing the President since his statement that the Marine Corps has "a propaganda machine that is almost equal to Stalin's". What branch of the services, of government, of private organizations, does not have some sort of machine that spreads doctrines and principles, both religious and secular? If the President was irritated by maneuverings within the government that he vented upon the Marines, then he made a grave mistake. He is not ignorant of American traditions and institutions and the Marine Corps is honored by the people of this land, as an American institution. It has been difficult for many to have the Marines named the Navy's police force, a branch of the fighting forces that has let its fighting speak for itself from the days of the American Revolution. The Marines may well be proud of themselves, as we are of them. From the sands of Iwo Jima to the shores of Tripoli, the devil dogs have spread their propaganda or doctrine, by giving their lives for it.

President Truman's apology to the Marine Corps, is in order, and accepted. But his letter had far better be unwritten, and as a man put it: "what Truman put into the mail-box is going to have an effect on the ballot box".

### NAPOLION WOULD BE ENVIOUS

Seldom does anyone pause to consider the logistics of sustaining a nation of 150,000,000 people. Transporting and supplying the mightiest military campaign in history becomes microscopic by comparison. If the food supply lines break down an army is doomed. How many of us ever think of the gigantic task of maintaining, without fail, civilian supply lines?

If you are inclined to scorn private enterprise, take a look around you the next time you walk into the local commissary—your neighborhood grocery store. For example, few of us know what goes on behind the showcase full of succulent cuts of meat. To make that meat available to you, there are over 80,000,000 cattle and calves on the ranges, in feedlots and on dairy farms—18 per cent more than 10 years ago. There were more than 60,000,000 hogs in the spring pig crop—up 21 per cent over 10 years ago. It takes a lot of farmers to raise and care for all of these animals. It also takes a lot of handling and processing to prepare the meat and output for consumption, and obtain lifesaving by-products such as insulin. There are 4,000 packing companies processing meat as it moves smoothly from the ranches and feeder farms to consumers' tables hundreds of miles away. The primary reason for the smoothness of this great logistical operation is competition which demands efficiency.

With fall approaching and harvesting drawing to a close on another record year, no expert analysis is needed to realize that producers, packers and distributors of meat are essential elements in the amazing supply system that keeps this country going. Its efficiency would make a Napoleon Bonaparte green with envy.

### F&M COLLEGE ANNOUNCES ITS EVENING COURSES

Franklin and Marshall College has announced the program of evening courses which will be offered by its Division of Community Services during the coming semester. Twenty courses will be given which may be taken on either a credit or a non-credit basis as desired. In addition, three courses will be offered purely on a non-credit basis.

The non-credit courses will be Pennsylvania Dutch, Motion Picture Photography and Resources of Lancaster County.

Registration for any of these courses may be accomplished by letter, telephone or a personal visit to the campus. Richard V. Showers, Director of Community Services, is in charge of the program and registration may be made with him.

### FEEDING POTATOES

Potatoes may be fed to dairy cows in amounts of 15 to 25 pounds daily, but be sure to start with smaller amount, suggests R. H. Olmstead, extension dairy specialist of the Pennsylvania State College. Any possibility of the cows choking on the potatoes can be eliminated by chopping the potatoes.

## Don't Neglect Your Hay Fever and "Summer Colds"

by FRED W. WITTICH, M.D., Chairman, International Association of Allergists

THE sneezing and sniffing that begins this week for millions of hay fever sufferers is a warning to one out of every two of us. More than half the U. S. population has some form of allergy, which, if ignored, often develops into more serious conditions. This can be avoided, however, because new methods of treatment are dramatically effective in coping with these annoying allergies.

The standard treatment for allergy has been the avoidance of whatever it is you are sensitive to and "shots" that immunize you against the offending agent. More recently, however, medical research has turned up drugs that are making the lives of many allergy sufferers more livable.

During the past year, we have confirmed the fact that the antihistaminic drugs, properly used, can provide considerable relief to most sufferers from allergy. Medical evidence indicates that almost 50 per cent of allergy victims, especially those suffering from hay fever and hives, will obtain spectacular relief from these drugs. Another 30 to 40 per cent will get at least partial relief.

Actually, these drugs have been known for some time to the medical profession, but the first chemical used produced side effects, such as sleepiness and drowsiness. These newer drugs in this field, however, have proved remarkably free from these side effects and have been used with complete safety by millions of people.

These are the same drugs which were made available to the public for use in treating the symptoms of the common cold this year, and which have attracted so much comment both pro and con. As to their effectiveness, there is no doubt that in most allergic conditions, there is release of a substance which doctors call H-substance or more loosely, histamine which is largely responsible for symptoms. It is now clear that the antihistaminic drugs

do block the action of histamine on the system. Innumerable experiments have proved that when the antihistaminic are administered the effects of histamine are counteracted and the allergic symptoms are greatly relieved if not completely eliminated.

The discussion this year around the antihistaminic has centered largely on the question of safety. There have even been rumors that these drugs have actually harmed people. I think my experience and a statement recently made by Dr. Harry E. Tebrock, Medical Director of Sylvania Electric Products, of the American Medical Association, who reported recently that he had not seen an actual case in which these drugs have ever done any harm. Said Dr. Fishbein, "I am unaware of any scientific verified published evidence or unpublished evidence of harmfulness."

Take for example the case of Neohetramine, the drug known to the public as Anahist. Recently Dr. Harry E. Tebrock, Medical Director of Sylvania Electric Products, using this drug in 8500 cases in a cold study, found only 2 per cent of the people showing any side

effects, and these were, as he put it, no more serious than the effects of a common cold. In another experimental study, this drug was given in doses of 500 milligrams a day to patients every day for six months. Drs. Judd and Henderson of the Pennsylvania State Department of Health, Hamburg, Pennsylvania, reported not a single untoward effect in any of these patients. In another experiment this drug was given to a series of 232 children from 6 months to 12 years of age, again without any untoward side effects. It was only after these and similar tests that this drug was released to the public.

Other antihistaminic, such as Chlor-Trimeton, Perazil, Benadryl, Pyribenzamine, Thephoran, Decapryn, Neo-Antergan, Hydryllin, Histadyl, Pyrrolazote, each have similar wide experimental backgrounds though they are available on a doctor's prescription.

Another new development available to the sneezing, sniffing public this season is the use of antihistaminic in an Atomizer that applies the medication directly to the affected parts of the nose. The medical profession has long known that fine sprays are sometimes even more dramatic and immediate than internal medication which has a slower though more sustained action. However, most of the drugs that we have used in nose drops or other internal medication have been suspected of adversely affecting the lining of the nose or excessively stimulating the central nervous system. The antihistaminic do not have these properties and may therefore prove a real boon this summer to hay fever sufferers.

With the 3-way treatment now available, avoidance, immunization and symptomatic drug therapy, we are well on our way to effectively controlling allergy. The big danger now is that people who have allergy will neglect it. Doctors now see only from a fourth to a third of all allergies. And recent evidence seems to indicate that untreated hay fever, for example, or allergic skin conditions may in many cases develop into serious asthma.

Humus for gardening can be provided from a compost pile. J. O. Dutt, extension vegetable specialist of the Pennsylvania State College says all kinds of vegetable material to catch rain water for moisture, can be worked into the compost pile along with fertilizer and some lime. ## Real Values Every Day At Your Friendly A&P

Customer's Corner  
School days bring new problems for many of our customers.

There are lunches to be packed, after-school snacks to be kept on hand.

Shopping habits may change, too, because the children aren't available to help.

If there's anything we can do either in the way of food or service to make your school days' shopping pleasanter and easier, please let us know.

Please write: Customer Relations Dept., A&P Food Stores, 420 Lexington Avenue, New York 17, N. Y.

## HAPPENINGS — of — LONG AGO

### 20 Years Ago

The Barbara Longenecker farm near Goods Church was sold to Samuel Longenecker of Middletown.

Christian S. Nolt farm, Silver Spring was withdrawn at public sale at \$180 per acre.

Ten head of sheep were killed by dogs on the Amos Stauffer farm Mount Joy RI.

91 attended the picnic of the Beginners Dept. of the U. B. Church held at the home of Mrs. Harry Wagner.

David Sternberger purchased the lot of ground between the properties of J. S. Carnany and Mrs. S. B. Bernhart.

The office force of Gerberich-Payne Shoe factory enjoyed a doggie roast at Keeners Park, Elizabethtown.

Two tobacco sheds were raised in 4 1/2 hours by 83 men on the Christ C. Forrey farm, West Donegal Twp.

Mrs. Phares Hawthorne, Marietta grew a 7-lb. red beet. It is 20 in. round.

Markets: Eggs, 36 1/2c; lard, 15c; Butter, 35c.

Mrs. Harry Diefenderfer of Ironville was severely shocked, when a bolt of lightning struck her home. For the second time this season a lilac bush is in bloom at Columbia.

## The Bulletin's Scrapbook!

### Week's Best Recipe:

Fiesta Hot Slaw: 1 medium-sized head cabbage, 4 canned pimientos, 1/2 c chopped, sweet pickles, 1/2 c cider vinegar, 1/4 c water, 1/2 t salt, 4 T granulated sugar, 1/4 t paprika, 1/4 t dry mustard, 1/4 c olive oil, 2 eggs, beaten, 4 T whipping cream. Shred cabbage finely. Cut pimientos into strips, combine with cabbage and pickles. Combine vinegar, water, salt, sugar, paprika, mustard, oil, heat to boiling. Combine eggs and cream. Stir hot vinegar mixture slowly into beaten eggs and cream. Return to low heat, cook 4-5 minutes, stirring constantly. Pour over cabbage mixture and serve at once.

The Almond Touch: Cook string beans whole, then brown slivered almonds in butter and serve over the hot beans. ... A topping for coffee cake: brown sugar, flour, butter and chopped almonds, blended together until crumbly and sprinkled over cake batter and bake. ... Shred cabbage fine, add sliced, cooked, dried apricots and slivered almonds. Toss this salad with mayonnaise. ... Dress a "store cake" with a frosting of a half-pint whipped cream, 1/2-pound melted chocolate bits and topped with slivered toasted almonds.

It's An Idea: A subscriber suggests a neat trick in encouraging a young daughter to come into the kitchen to help mother and to learn about cooking. She suggests using remnants of attractive fabrics for mother and daughter aprons that match. It adds a bright note to the kitchen and is using a bit of psychology with the stew pan.

Smile Awhile: To laugh is to be free from worry. He who doesn't worry lives a long time. To live a long time is to last. Hence, he who laughs, lasts.

CONTROL LATE BLIGHT Penn State extension plant pathologists urge tomato growers to continue spraying or dusting their plants for protection against late blight. Fixed copper, bordeaux mixture, or a mixture of fixed copper and ziram may be used for spraying.

CHARACTER ..... Our differently better methods of Directing... our assiduous attention to YOUR Family Customs and Traditions lend a "Character" to the Tribute you will always remember pleasantly.
