

# The Mount Joy Bulletin

Jno. E. Schroll, Editor and Publisher

ESTABLISHED JUNE, 1901

Published Every Thursday at No. 11 East Main St., Mount Joy, Pa.

Subscription, per year .. \$2.00  
Six Months ..... \$1.00  
Three Months ..... .50  
Single Copies ..... .05  
Sample Copies ..... FREE

Entered at the Postoffice at Mt. Joy, Pa., as second-class mail matter under the Act of March 3, 1879.

Member, Pennsylvania Newspaper Publishers' Association

Publication Day, Thursday  
Copy for a change of advertising should reach this office Tuesday. We will not guarantee insertion of any advertising unless copy reaches the office not later than 9 a. m. preceding day of publication.  
Classified ads will be accepted to 9 a. m. publication day.

## EDITORIAL

The editor received many complimentary personal and phone calls since our last issue relative to the Estock editorial. Evidently we voiced the sentiment of a host of influential citizens.

Like most people, we don't mind a "pat on the back" but to all our readers we are desirous of conveying the fact that when you read something you don't like, please feel just as free to tell us.

We never profess to "know it all", neither are we error proof. We always welcome criticism.

As many of you know, the writer has the credit of being just plain contrary. In reply we say: For information, always: At heart, never. Whenever we hear a subject being discussed, what could one learn if he were always a "yes" man? Absolutely nothing.

But during that same discussion, can you imagine the vast amount of information one can obtain by taking the negative side?

The writer will invariably take the opposing issue on any subject being discussed verbally. But on the other hand these editorials are our fearless and as near as we know truthful expressions gained during arguments, plus information obtained by perusing other newspapers, magazines, radio and television.

The editor will continue to be contrary just for that very reason.

### NOT UNUSUAL

A news item was sent out of Washington last week concerning a sailor who threw \$30 worth of material overboard on order.

That is nothing new to the editor. Time and again we have interviewed sailors as well as soldiers on that same subject.

As an illustration take a sailor training ship on a one or two months cruise. They are always provided with ample food, "etc." Upon their return, if they dump the surplus overboard, a fresh supply will always replace it on the next trip.

After World War II many of you would be surprised if you knew just what went overboard (when the soldiers were on their way home).  
The seas, in a sense, are the world's dumping grounds, some placed there voluntarily, others involuntary.

Some years ago when the buyers at Lancaster "got together" and bought tobacco at their own prices, the growers got up in arms. They formed the Lancaster County Cooperative Tobacco Growers Association. They bought a warehouse, growers took their crops there, given a certain amount on account, the tobacco was packed, sold and in many instances the grower profited.

The organization was a thorn in the flesh for quite some time and during late years those big dealers paid fairly good prices and the Co-op. was left holding the bag.  
At a recent meeting of the Co-op. directors they decided to sell its real estate and here's hoping the big buyers don't take advantage of the situation if the protective group folds up.

On a recent trip to Lancaster I had occasion to "stay put" in the Square for about ten minutes. During that time I saw many people wandering about but how times have changed.

When I was a kid if I had a penny I would stare thru the glass of a show case for ten minutes before giving up that copper.

But, believe me, there is a vast difference today. Everybody seems to have a few dollars which might be spent for a soda, a pair of nylon, a movie, a bottle of perfume,

## HAPPENINGS

### LONG AGO

#### 20 Years Ago

Wed. Feb. 3, 1932  
Of the 4378 automobile accidents thruout Penna. last month, the largest majority were caused by faulty brakes.

Messrs. Jacob N. Hershey, of Florin, and Henry H. Eby, of near Bender's Mill, left for Florida where they will join their wives who have been there for some time.

Fire destroyed the tobacco shed and 23 acres of tobacco on the Clayton Hoffman farm, Elizabethtown RI.

Mrs. Herry Aument, Landisville, was injured when a car in the driveway was a passenger, upset on the Harrisburg Pike.

Samuel Heisey, who is hired with Amos Herr in East Donegal, was badly injured when he fell asleep and his car hit a tree.

Fire Council here bought 500 ft. of fire hose.  
The School Board here purchased sixty lockers.

A meeting will be held on Friday evening for the purpose of forming a George Washington Bi-Centennial organization.

Mrs. Herry Kaylor was hostess to the Evangelical Ladies Bible Class.  
The Rotary Club's meeting was devoted to a study on Marmota Moxam—in plain English, Ground Hog.

A meeting of the American Legion Auxiliary was held at the home of Mrs. Clyde Esbleman.

Due to a recent ten percent reduction in wages, the Grey Iron Casting Company has reduced the rents on all its houses accordingly.

Friendship Fire Company extinguished a chimney fire at the home of Samuel Meckley, on the C. S. Frank farm.

A lot of people can't get into high gear because they are shiftless.

Since "an ounce of prevention is worth a pound of cure" and since a child's teeth develop within the jaws at least four months before birth, it is essential that he receive the proper amount of building materials to insure the formation of good strong teeth.

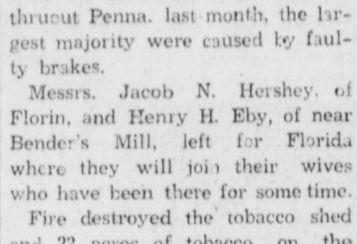

Because decay begins early and spreads rapidly, children should be taken to their dentist early in life, not later than three years of age. These visits should be continued throughout life at regular intervals.

Between visits to the dentist much can be done to control the rate of tooth decay by keeping the mouth clean. Teeth should be brushed or at least rinsed after each meal, and especially after eating sweets—before tooth-decaying acids can form. A recent study among over 500 students showed that decay can be reduced as much as 50 to 60 percent by brushing or rinsing the teeth immediately after eating.

A copy of last year's dental examination summary may help to give a clear picture of our local problem. During the school year of 1950-1951, 364 children received dental examinations in the Mt. Joy Borough Schools. Among these children were discovered 2181 defective teeth, 1064 filled teeth and 11 congenital deformations.

To attack this problem the school is trying to make the children, and through them their entire family, more tooth-conscious. The Art Department under the direction of Mrs. Beryl Hahn is conducting a Dental Poster Contest. Prizes for this feature will be awarded to each school division at special assemblies—one for the elementary grades at 10:40 a. m. and one at 2:40 p. m. Feb. 15, 1952. Movies have been secured from the American Dental Association for these assemblies. The posters will be on display throughout the borough from Feb. 11 to 18, 1952.

The School and Home Association is sponsoring a tooth-brushing contest by which, with the aid of the teachers, they hope to show these little ones the desirability of keeping a clean mouth. This part of the program will begin next week and will continue for four consecutive weeks.

From—Mr. W. P. Lancaster, Pa.

Q.—Is there any formula to follow in stocking a farm pond?

Ans.—Yes, definitely. Stock your pond with 100 bass and 1,000 bluegills per acre of water. Your local Soil Conservation Commission man will be glad to give all the information you need on the construction of your pond.

From—Mr. J. M. C. Upper Darby, Pa.

Q.—How long have we had the United States Department of Agriculture and who formed it?

Ans.—History tells us that the United States Department of Agriculture as we know it today came into being in 1862, even though it had been suggested by our first president, George Washington, as long before that date as 1776. Thus to President Abraham Lincoln, our 16th president, goes the credit of organizing the Department of Agriculture.

From—Mr. F. W. Bristol, Pa.

Q.—Is there any way to detect whether or not the hay in the hay mow is about to burn?

Ans.—Unfortunately, there is no set rule of thumb for automatically eliminating this hazard. However, when your mow shows first signs of heating, take the temperature of the mow with a hay probe. This hay probe is simply a piece of pipe or tubing about 10 feet long. A redwood point is fitted onto one end so it can be driven easily into the hay. Holes are bored in the pipe right above the point. Then when a thermometer is set down inside the pipe or tubing, you can easily take the temperature of the hay with little or no guesswork.

From—Mr. F. W. Bristol, Pa.
