Vacation Time Ahead

The idea of closing down a business during the first week in July is one we would the train was approaching. His wife screamlike to see spread to the whole town. Closing ed, but the man calmly said: "Go on. You've down for a week enables a small plant, like been driving all day from the back seat. I've miles each, ours, to make certain repairs while every-body is off having a good time. body is off having a good time.

This year, though, a number of local in- on Monday, so she's O. K. dustries are divided over whether to take the week beginning June 29 or the week starting July 6. Right here and now, we're serving notice that this y'ar paper's not coming out Thursday, July 2 and that we'll law every time she goes out in the yard and be closed up tight from June 27 until Mon- he says they're worth their weight in gold. day, July 6.

Just in case you want to see the editor, you'll find him taking it mighty easy on the side porch — and he won't be in any mood to talk business, either!

Fresh Air Kiddies

Providing you are equipped to properly entertain a couple of small tots and in a manner which will prove beneficial to them, get your name in now for a couple of Fresh it, it ain't so hot." Air Kiddies from New York. We've watched these kiddies arrive each year for quite a few years now and it's our firm conviction that, as much as those kiddies are benefitted, weeks this summer!

The sight of farmers putting out tobacco the third week in June is something different! It used to be that tobacco farmers felt if they didn't get the tobacco plants in the ground by Memorial Day, there just wasn't any use putting them out. For that matter, we wonder if the old rules don't still apply.

We've Got Real Security

We humans spend most of our time on earth seeking security. We want to feel that, come what may, we're not going to go hungry or without those little comforts which mean

Well, last Friday we came across a scene own doorstep, we've got a brand of security unmatched in any part of the globe. We were driving through rich Lancaster county land, when we sighted nine tractors traveling back and forth across a single corn field.

but the sight of all those tractors working in one field was enough to get us out of our the check with a flourish saying, "Come, come, car and to start snapping pictures.

"Whats' it all about?" we asked one of me—and mind, I'm in somewhat of a hurry."

the tractor drivers. "Oh we're just seeing that Arthur Nissley's corn gets cultivated," he replied. "He's back in the hospital the second time in a few weeks and we just don't want him to be worried about the work not getting done on his farm.'

And then came the pay-off. "We couldn't let too many folks know what we planned to do," he explained, "because if we had there'd been twenty or more tractors out here this morning, and we'd been getting out it. I even carry a \$50.000 policy, payable in each other's way all morning - as it is, some of the other neighbors are going to be mighty sore when they learn they weren't

That folks, is real, honest-to-goodness se-curity. Here in Lancaster County it's just the run-of-the-mill sort of thing. Sure, but try to find it in any of the big cities!

*

Purely Circumstantial

In the wake of the new tornadoes that killed 140 in Michigan and Ohio and at least 68 in Massachusetts, injured nearly 2,000 more and left many thousands homeless scientists are trying to explain the 249 twisters reported in the U.S. thus far this year and law-makers in Washington are talking

of a Congressional investigation.

According to the U.S. Weather Bureau, the atomic explosions in Nevada have nothing to do with the sudden, devastating storms that appear to follow the major blasts, and that have caused a total of nearly 450 deaths and property damage of more than \$200,-000,000. Rather, the weather experts say, the tornadoes have been caused by the unusual path of the planetary air current across the nation this spring. This current, which flyers have encountered above 10,000 feet and reported as blowing as hard as 250 miles-an-hour, is always up there, it seems, but affects the weather by changing the pattern of its trans-continental sweep.

So far so good. But we doubt that any scientists were up there above Yucca Flat to check on what happened when an atomic burst tangled with that high-speed fresh air. In any case, we think the far reaches of the lonely Pacific provide a more suitable locale for these top-drawer fireworks.

OWL LAFFS

An uptown man told us that on Sunday he was out driving with his wife in the back seat when he stalled the car on a railroad track as morning and the airplanes take off how she did it, but I saw her hang wash out attached to a half-gallon bucket in-

That same man keeps bees, but not for the honey he gets. The bees sting his mother-in-

You all heard of people eating too much, but did you ever hear about the time Frank Shreve was eating at a certain place in Mount-He had three helpings and then gave the waitress a "tip" so she would put more on the fourth one.

Philosopher Enck says: "Marriage is just like sitting in a bath tub. After you get used to

A Florin housewife went away for the summer while her hubby stayed home and workjust as much. Give yourself a treat—take a ed. After she was gone a few days he found more efficient service. Fresh Air Kiddie or two for a couple of she had taken the key to the mailbox with her The mail was piled up in the box and he knew some must be important, so he wired her to get the key to him quickly, you know what she did? Yep! You guessed it. Sae mailed it to

> When it takes you twice as long to rest and fire safety expert revealed in a rehalf as long to get tired, Man you're getting

Bill Shaffer told me there is no difference between a grasshopper and a grass widow -

He said both jump at their first chance.

sulated and protected from shock by foam rubber on the inside. Association's stud includes Jersey, Guernsey, Holstein, Milking Shorthorn, Brown Swiss and Angus. Ozark dairymen report they are highly pleased with the quick and

'Wet Water' Valuable New Weapon to Fight Fires

A valuable new weapon for fighting smouldering fires in stored grains and other farm products-"wet water"-now is available for the use of rural fire departments, a cent report.

The new "wet water" for fighting fires incorporates a small percentage of a detergent, the cleaner so familiar to housewives on laundry day. However, the detergent solution, about 2 per cent, is of the nonsudsing variety for use in pumpers

and extinguishers. Dale K. Auck, fire prevention en-gineer for the Federation of Mutual Fire Insurance Companies, said the detergent breaks through greasy heart of a fire immediately where ordinary water merely runs off

'Many stored hay or baled cotton fires have smouldered internally until entirely consumed, despite tons of water poured on the surface,' Auck said. Experiments have shown, however, that only 40 galdo the work of 300 gallons of ordinary water in fire fighting.

Rural fire fighting organizations are being urged to make "wet water" a part of their regular equipment because water damage can be lessened considerably and fire destruction held to a minimum with the use of "wet water."
