**DON'T COOK YOUR GOOSE BEFORE CHRISTMAS**

In all Christian lands, Christmas is a time for feasting — but don't cook your goose before Christmas! Every yuletide hundreds of lives are snuffed out or ruined by careless accidents. Some of these occur in preparation for the joyous season — falls while putting up decorations, or burns incurred while cooking. But the greatest toll takes place on the nation's highways, while the victims are bound to or from the get-togethers that are so much a part of Christmas.

The National Safety Council has found that traffic accident deaths on both Christmas eve and Christmas day are about twice as high as the annual daily average. Family gatherings and other festivities bring the peak travel of the winter. And when more cars are on the move there is more chance of an accident.

Early darkness plus bad weather add up to poor visibility. Fogged windshields also make it difficult to see and avoid accident situations. Rain, snow and ice mean slippery streets and highways, but thousands of holiday drivers fail to adjust their speed to hazardous conditions.

The good fellowship of the season stimulates more drinking — and too often the celebrants clink glasses with death.

Seven hundred and forty persons died as the result of accidents during the Christmas holidays last year — and the toll of 556 killed in traffic accidents was the highest on record.

For a merry Christmas this year, be wary.

Don't cook your goose before Christmas!

**Heads Sports Drive**

GRANTLAND RICE, dean of American sports columnists, is chairman of the National Sports Drive for MARCH OF DIMES, January 2-31. He urges all sports promoters, athletic directors and everyone connected with sports to help beat infantile paralysis by contacting their local March of Dimes campaign director and join in the fight against this dread disease.

**SCIENCE and your Health**

HIGH STANDARDS IN CHEMISTRY by Science Features.

One of the major problems facing scientists who search for new chemical weapons against disease is to find drugs which will be harmful to disease organisms — but harmless to the human body.

To maintain these high standards, every drug is thoroughly tested in the laboratory before being released for use in humans. It must not cause any harmful "side-effects," even when given for a prolonged period of time and in doses sufficient to combat the germs.

One indication of how successful such efforts have been was shown in a recent report by two Army physicians who treated 70 tuberculosis patients with massive doses of terramycin for four months. The patients were given five grams of the antibiotic daily, instead of the usual one gram dose.

Reporting on the patients' response to the treatment, the physicians said that none of the patients had to have the drug discontinued during the four months — and noted that such heavy doses of terramycin had scarcely ever before been given for so long a period.

In cases where mild stomach upsets were noted, these reactions were checked by giving the drug with meals, with cream, or with other syrup, the doctors said.
