Roy Hess To Conduct Farm Census

Appointment of Roy Good Hess of Manheim as a crew leader for the 1954 Census of Agriculture was announced today by Field Supervisor Jno. Stouff of the Philadelphia Office.

Mr. Hess will direct a force of fourteen enumerators who will canvass all farms in the Western Part of Lancaster County on Oct. 11 to the census agriculture field office at the Customs House, Philadelphia, for a week of training.

The crew leader is one of the key people in the field operations of the Census of Agriculture. It is his responsibility to train the enumerators and supervise their work; plans and allocate work assignments; review the work of the enumerators and take re-medical action where necessary, and to conduct difficult enumerations.

After attending the training conference, Mr. Hess will return to his district where he will spend three weeks recruiting enumerators, checking enumeration district boundaries and training enumerators in preparation for the start of the census on Monday following Election Day.

BIRTHS

Mr. and Mrs. Richard F. Grotfend, Barbara Street, a son, Friday, in the Lancaster General Hospital.

Mr. and Mrs. Richard Ruhl, Mount Joy R1, a son, Friday, at the Lancaster General Hospital.

Fire Prevention Rules Listed

Eight deaths and untold injuries were caused by fire in Pennsylvania's rural areas during the first nine months of '54, according to Edwin S. Warfield of the Pennsylvania Threshman and Farmers' Mutual Casualty Company, Harrisburg, Pa. Warfield based his figures on records kept by the Division of Farm and Home Safety Education, State Department of Public Instruction. There were 24 rural deaths by fire in 1953, although it looks as if 1954 deaths will be fewer than in 1953.

"It is well to keep these figures in mind," said the insurance representative, also a member of the Penna. Rural Safety Council, "and resolve always to do all we can to prevent fires as we observe Fire Prevention Week this week."

Warfield advised removal of fire hazards in the home and around the farm. He urged everyone to:

Replace rods or wires that are damaged or worn in the lightning-rod system and make sure ground connections are secure.

Correct defects and clean all chimneys and flues regularly.

Install spark arresters on chimneys. Correct faulty construction, remove leaves, guard against sparks and embers.

Overhaul and clean defective heating equipment.

Cultivate careful smoking habits and provide plenty of ash trays.

Keep gasoline, benzene, naphtha or similar flammable liquids out of the house. Do not use kerosene, gasoline or any flammable liquids to start or boost fires in stoves, ranges, or fireplaces. This caused five of the eight 1954 deaths.

Keep wet hay out of barns and check on cured hay to prevent spontaneous combustion.

Replace frayed or worn electrical wiring, replace or repair defective electrical appliances.

Remove rubbish from house regularly and do not let oily rags accumulate.

PLAY TRYOUTS

Tryouts for the play "Old Doc" will be held Tuesday, October 12, at 8 p. m. in the Post Office Building, Lancaster.

"Old Doc" is the name of the play chosen by the 4-H Clubs of Lancaster County for their annual play to be presented on Saturday, Nov. 27.

All 4-H'ers are invited to try-out for a part in this play.

To Make Study Of Atomic Power

In a statement today, Chas. E. Oakes, president of Pennsylvania Power & Light Company announced that the local utility has signed an agreement with the Atomic Energy Commission granting PP&L the opportunity to proceed with studies, at its own expense, to determine what contributions the company might best make to the development and application of atomic power. The one-year agreement permits company research to "determine the feasibility of installing an atomic power electric generating station with an initial capacity of approximately 200,000 kilowatts." The P. P. & L. study, according to Mr. Lewis L. Strauss, chairman of the U. S. Atomic Energy Commission, is the fifteenth to be undertaken under the Commission's program for research participation by industry.

Under the agreement the AEC is willing, in the interests of forwarding the atomic energy program, to assist the company in carrying out this study by making available pertinent information and, for consultation purposes, a reasonable share of the time of its personnel and that of its contractors. This includes making available, to security-cleared personnel of the company, technical data on the reactor development and arrangements for visits by such personnel to the AEC laboratories and reactor installations.

P. P. & L. officials expressed great enthusiasm over the opportunity to participate in the development of electric power from nuclear energy. Earlier, PP&L had been one of the bidders on the 60,000-kw. nuclear power projects awarded the Duquesne Light Company and now under way at Shippingsport, Pa. The Duquesne project has the same basic reactor design, pressurized water type, as that to power the Navy's new atomic powered submarine, Nautilus. Under the terms of the agreement announced today, the AEC gives PP&L the opportunity to study the various types of reactors already developed or under study.

The local utility already has a substantial record of research and development in the electric power field and is highly interested in the study of atomic fuel as practical sources of electric power.

Among its previous research accomplishments contributing to the greater dependability and low-cost of service to its customers, PP&L, through its predecessors, was largely responsible for the development of practical equipment for the burning of the smaller-size hard coal; was one of the pioneers in the development of the 220,000-volt interconnection grid which now ties together the electric companies of most of Pennsylvania, New Jersey, Delaware and the Baltimore-Washington area for the interchange of electric power; was a pioneer with one of the nation's largest electrical manufacturers in research on the effects of lightning on transmission lines; was one of the first to use capacitors in extending the load-carrying capabilities of transmission lines; was the primary experimenter in the planned "shorting" of transmission lines to melt sleet coatings; and most recently has built at Martins Creek one of the first "outdoor" steam electric stations in the north.

The local utility has also, within the limits of rules and regulations applying to research in the atomic field, been making considerable study of the electric generating potentials of nuclear energy for quite some time. A research area is already established in line with the government's regulations to which no one is admitted except the well-screened 15 members of the team associated with the study.

Asked to explain, in layman's words, how atomic power can be used to make electric power, Mr. Oakes said that steam generating equipment "fired" by atomic fuel would be substituted for the present coal-gas- or oil-fired steam boilers. The resulting atomic power plant, he explained, would look much like the present-day steam electric station minus the usual stacks and furnaces.

All costs for the company's studies, Mr. Oakes said, would be borne by the company in the belief, on its part, that business-managed enterprise should car-

Local Church To End Celebration

Sunday, Oct. 10, will mark the last day of the week's sesquicentennial celebration of the Trinity Evangelical Congregational Church. Bish. J. A. Smith of Allentown, will be the guest speaker at two services during the day.

Rally Day will be observed at 9:15 a. m. with the Bishop Smith as the speaker followed by a musical program. He will also speak at a special 2:00 p. m. program which will be a community rally. Bishop Smith has worked in the eastern area for the past 12 years, four of which he served as bishop. Last week, he was again elected to serve a four-year term as bishop when he was chosen at a conference meeting in Lancaster.

"The Honest Tile-Maker" is the title of the pageant which will be given at 7:30 p. m. in the church. It was produced and will be directed by Mrs. Amy Faust, daughter of the local minister, Rev. Q. A. Deck. Mrs. Faust is the wife of Dr. Harold Faust, minister of the First Presbyterian Church, Beaver Falls, Pennsylvania. The pageant centers around the history and the founding of the church. The founder, Jacob Albright, was a tile-maker by trade. Also included in the historical pageant will be an account of the first bishop of the church, Bishop John Seybert, who was born near Manheim. He was also the first class leader in the Mt. Joy church.

John Hart, Mount Joy, will be the narrator of the pageant and members of the church and Sunday school will take special parts.

ry its fair share of the costs of developing atomic fuels for commercial use. The company, Mr. Oakes said, is setting up a substantial budget for work within the next year.
