

## Editorially

As a point of interest we'd like to know how many of Pennsylvania's 3,000,000 motorists know that there is an official road map of the state produced by the Department of Highways.

We have no way of knowing and we don't suppose anyone else would either.

It doesn't really matter — except in this way: Last week we noticed a story pointing out the fact that the new maps now being issued were drafted with the cooperation of three state agencies — Department of Highways, Department of Forests and Waters and the Game Commission.

The new highway map of Pennsylvania lists state parks, state forests, state game lands and various and sundry kindred items — and oh yes, the roads of the state.

This is splendid and fine and delightful — but how many people know of the map, or for that matter have one in their possession?

Maps are costly items to produce and the more we thought about it the more we began to wonder why Pennsylvania should go to the tremendous expense of producing the things.

Today maps galore can be picked up anywhere, anytime — for free — at any gas station, some of them quite beautiful creations, created not at the cost of taxpayers but the gas companies themselves.

In the horse days before this became the practice, the official state map as the only answer made sense — but today we wonder.

## Special Services Needed In Schools

Harrisburg -PNS- Somewhere between ten and 15 per cent of Pennsylvania's public school enrollment is in need of special services or handling of one type or another Pennsylvania News Service learned this week.

A spokesman for the Department of Public Instruction said that for the most part this group includes the mentally retarded children.

It was pointed out that not all the school children within this percentage group need special class placement, and that in many instances the number of such cases within a school district is so small that the costs of providing the necessary class for one or two children is virtually prohibitive.

Legislation enacted by the 1955-56 Legislature is expected to help correct this condition in large degree, especially insofar as mentally retarded children are concerned.

The department had this to say: "Findings have indicated that the greater use of pupil transportation and larger attendance areas have not been fully utilized so far for handicapped children."

Regarding many of the severely mentally retarded children, it was noted that certain training procedures and devices have already been established to help such children.

On the other hand retail trade led the non-manufacturing industries with 10.4 per cent of the total, and was followed by construction and contracting with 9.5 per cent.

## Ambulance Is Called For Use

Four calls were answered by the community ambulance during the past week. Monday, July 2, Mrs. Henry Hostetter, Donegal Springs Road was taken to the Hess Rest Home, Oyster Point by drivers George Copenhaver and Thomas Markley. Mrs. Simon Nissley was the accompanying nurse. The same day the drivers and nurse transported Miss Emma Nissley, West Donegal Street, to the Lancaster General Hospital.

Wednesday, July 4, Mrs. John Moore, Marietta Ave., was taken to the St. Joseph's Hospital by drivers Christ Charles and Ray Myers. The same day he two drivers took Mrs. Wisegarver, East Main Street, to the Harrisburg Hospital.

Wednesday, July 4, Mrs. John Moore, Marietta Ave., was taken to the St. Joseph's Hospital by drivers Christ Charles and Ray Myers. The same day he two drivers took Mrs. Wisegarver, East Main Street, to the Harrisburg Hospital.

## FHA Trade-In Aids House Buyers

Harrisburg -PNS- The recently expanded trade-in house program of the Federal Housing Administration has made it possible for Pennsylvania realtors to help home owners in buying better houses with almost the same ease with which they exchange their cars on new models, the Pennsylvania Realtors Association asserted this week.

Association President Richard W. Fechtburg said that through the new FHA action the real estate broker can qualify for loan insurance in taking over an individual's house prior to the new transaction.

This makes it easy for the broker, he explained, to arrange for interim financing, accept title to the original home and arrange for the client's equity as the down payment on the purchase of the second home.

"This plan can be a real boon to families who need either to expand or to contract their housing facilities," he told Pennsylvania News Service. "A family needing a larger home hesitates to take title to a second home until the older dwelling has been sold and cash received."

He said that likewise a family hesitates to offer its present home for sale unless it holds at least an option to buy a home of its choice.

"The resulting complications discouraged many families from making a change except under most compelling circumstances," he declared.

## Upswing Noted In Worker Injuries

Harrisburg -PNS- An upswing of more than 4 per cent was noted in workers injured while at their jobs in Pennsylvania industries last month.

The total number of Keystone State workers on the injured list stood at 7101 — and when compared with the injury load a year ago was up nearly 13 per cent — or 1.5 per cent above the entire monthly average last year.

On the other hand fatal injuries alone during the month dropped to a new record low of 43 — dipping from 74 in the preceding month for a decline of 42 per cent.

Accidents in manufacturing firms in Pennsylvania caused 2917 injuries. However only seven were fatal injuries. On the other hand non-manufacturing industries were credited with 4184 injuries, of which number 36 resulted in death.

A breakdown shows that primary ferrous metals and fabricated iron and steel products industries accounted for 14 per cent of the work injuries in manufacturing firms.

On the other hand retail trade led the non-manufacturing industries with 10.4 per cent of the total, and was followed by construction and contracting with 9.5 per cent.

## Urges Voters Register

Residents registering to vote at the Court House and at special registration sites in the County were strongly urged yesterday by Paul Hipple, Democratic Registration chairman for Mt. Joy Borough, to be sure to know their voting districts. Failure to specify the proper voting district can result in confusion at the polls on election day, Hipple warned. He urged residents to contact neighbors if they are not sure of their district.

Mr. Hipple also stressed "that it is vitally important that all change-of-address cards bear the personal signature of the voter involved." "Otherwise," he added, "they will not be honored."

The chairman explained, that the law says in effect that the signing of a change of address card or a removal notice for voting purposes, cannot be deputized to another person.

There are several rules to be observed in filing a removal notice, and they are as follows:

(1) When moving (a) From one ward to another within a Borough. (b) From one District to another within a Township. (c) From a Borough Ward to a Township District or vice versa.

(d) From a Ward in one Borough to a Ward in another Borough.

(e) From one Township to another Township etc., the voter must have lived at the new address at least two months preceding the election. Otherwise, anyone moving from one Ward or District to another after September 6 is not eligible to vote.

(2) The Commonwealth's Permanent Registration is set-up on a county basis. Thus, if a person moves from one county to another, he must re-register.

(3) Be sure to sign your name on the Removal Notice just as you signed it when you registered to vote. Eliminate prefixes such as Mr. or Mrs.

(4) Persons within a ward or township district may sign a change-of-address card or removal notice at the polls and then vote. They need not go through registration formality.

## FALMOUTH

Daily vacation Bible school is being held by the Sharon Mennonite Mission, 401 Main Street, Steelton. Dr. Clarence Ebersole, director. Teachers are chosen from the Good Mennonite and other Mennonite churches.

Rev. Ira Miller, Pastor of Good Mennonite Church will speak at Edgemont Sunday morning at 10:30. Sandbeach Mennonite Mission will have as their speaker Sunday, Bishop Peter Smith.

Mr. and Mrs. George W. Webb, Sr. of Rock Port, Conn. are visiting their son and daughter-in-law, Mr. and Mrs. George W. Webb, Jr.

Rodney Jink and Luke Gerber are spending their vacation at Ocean City, N. J.

## New Medicine for Dandruff (MFD)

Kills Infectious Germs on Contact — Restores Hair to Health

Science has discovered a Medicine that kills dandruff germs by the thousands, relieves itching, inflammation and soothes irritated skin areas. Named MFD, this Medicine dissolves flaking skin tissue, floats away scalp debris with its medical detergent ingredient. Leaves the scalp clean and refreshed. MFD restores hair to health by dissolving, washing away dirt, oil and foreign matter plugging up hair follicles so hair can "breathe" again. MFD stimulates blood flow to scalp, nourishing hair roots, helping keep hair healthy and attractive. MFD can help prevent infectious germs from spreading to face, neck, chest or back. Only \$1.25 — fully guaranteed. Sloan's Pharmacy

## NEW UNIT GOES INTO OPERATION AT PP&L'S MARTINS CREEK PLANT

Electric power from the new second unit of Pennsylvania Power & Light Company's Martins Creek steam electric plant surged into the company's vast power supply system for the first time at 12:26 a.m., Monday, June 25.

Mr. J. A. Snyder, PP&L's Assistant General Supt. carefully closed the switch that synchronized, or brought the new unit "in step" with the rest of the system. Only when the unit's turbines reaches the exact speed at which all other PP&L generating units are operating, can the switch be closed to successfully tie this new unit into the system. Present for the important synchronizing operation were Mr. H. Ferguson, Operating Vice President; Mr. W. J. D. Geary, General Supt.; Mr. C. E. Lewis, Supt. of Generation; Mr. E. L. Rerig; Technical Asst. to the Supt. of Generation; Mr. W. H. Kopenhaver, Martins Creek Plant Supt.; Mr. J. S. McKelvey, Asst. Supt. at Martins Creek; along with various other PP&L operating and technical personnel. Also in attendance were various manufacturers and suppliers' representatives.

The new unit is expected to add about 160,000 kilowatts of generating capability to the PP&L system. This brings the company's total generating capability to nearly one and a half million kilowatts, or more than 3 times its capability at the close of World War II.

The stage was set for actual synchronization of the unit several days ago when Mr. Kopenhaver, Supt. of the Plant, eased open the turbine throttle valve, that allowed steam to rush against the blades of the 350 ton turbine for the first time. The huge turbine was run at various speeds during which time repeated checks were made on the machine and its related equipment.

The turbine was finally brought up to its normal operating speed of 3,600 revolutions per minute early Monday morning, at which time it was out into the company's system.

This newest unit is a twin of the first unit at Martins Creek that began producing power for PP&L customers on August 13, 1954. Preliminary work was started on the new unit at about the same time the first unit was placed in operation. Completion of the second unit will enable PP&L to keep abreast of the rapidly growing power needs of customers throughout Central Eastern Pennsylvania.

Weeks of testing and re-testing of every piece of equipment included in the new plant addition from the giant turbine generator to the smallest set screw preceded the day when the new turbine generator first went "on the line." Fuel lines were blown out . . . pumps, valves and air controls were set. Electrical equipment and wiring was tested and retested. Lubrication systems observed night and day.

Several days before the first steam was admitted to the unit, the boiler which produces the steam was fired with oil to thoroughly dry it out. Next, the boiler was given an internal acid bath to remove scale and foreign matter. The boiler was then ready for firing with coal in preparation to putting the unit in service. The huge boiler is capable of producing steam at the rate of 1,200,000 pounds per hour.

With completion of work on the second unit, the Martins Creek plant and its related transmission facilities will represent an investment by the utility of about \$44 million, part of PP&L's gigantic post-war building program which totals \$447 million for the 15-year period ending 1960.

The Martins Creek plant itself occupies a 485-acre tract along the Delaware River about 18 miles below Stroudsburg. It is unique because of its outdoor design and was one of the first of this type construction in the north.

Unlike other PP&L plants in appearance, the Martins Creek silhouette is dominated by four huge coal silos holding a total of 4,800 tons. An average of 10,000 tons of coal will be consumed every week when the two units are in regular operation.

Away on Her Birthday? She'll Love Your Long Distance Call

Every woman likes to be remembered on "her" day. And, if you're away there's no better remembrance than a long distance call. Long distance is fast and so, so personal. The way to a woman's heart is through thoughtfulness . . . and what could be more thoughtful than a call on her special day.

So, telephone your birthday greetings this year. It's well worth the low cost. And if you call after 6:00 PM or all day Sunday, when rates are still lower, you'll find it's even more economical!
