Sell \$30 Million USDA Needs Bond Issue Twin Heifers For Research

Pennsylvania Power and Light Company has sold \$30 million of 30 year, first mortgage bonds bearing interest at the rate of 4 1/2 per cent, it is announced by Chas. E. Oakes, the utilities board chairman and chief executive officer.

The bonds, which were sold on the basis of competitive bids for 100,571 per cent representing a net increase cost to the local utility of approximately 4.59 per cent.

Net proceeds from the sale of bonds will be initially added to the company's general funds and subsequently applied toward the retirement of \$30 million of short term bank loans, incurred to meet construction expenditures and to retire certain long term promissory notes.

At the same meeting, the Board of Directors also increased the regular quarterly dividend on the Company's common stock from 31.25 cents to 33 cents per share, payable January 2, 1962, to shareholders of record December 8, 1961. The increase will mean dividends declared for the year 1961 will be \$1.27 as compared with \$1.25 for the previous year.

One pair of flies, if all offspring survive could produce 191 quintillion in one season. These would weigh 9.5 trillion tons and occupy 101 quadrillion cubic feet.

Virginia, and southeast Pennsylvania.

Owners willing to sell identical-twin heifer calves that meet USDA specifications are requested to write Dr. R. D. Plowman, Dairy Cattle Research Branch, Animal Husbandry Research Division, Beltsville, Md. An inspector will be sent to check the calves before purchase.

Identical-twin calves are rare. They develop from a single cell and are always of the same sex. The twins look very much alike and react in much the same manner. Their markings frequently are repeated on the same or opposite sides.

Identical calves are useful in research because of their similar physical reactions. Experiments with a single pair give results as reliable as those from tests made with several animals less closely related. The Beltsville scientists will use the twin female dairy calves needed by U. S. Department of Agriculture scientists for use in management and nutrition studies at the Agricultural Research Center, Beltsville, Md.

The calves can be either purebred or high-grade animals of the five major dairy breeds. They can be of any age up to 20 months.

The calves are being sought primarily within a 250-mile radius of Washington, D. C., to hold shipping costs to a minimum. This area includes Maryland, Virginia, West
