

Prayer Of The Week - - -

The prayer this week is again an evening prayer by John Baillie:

O God, the Father of all mankind, I would bring before Thee tonight the burden of the world's life. I would join myself to the great scattered company of those who, in every corner of every land, are now crying out to Thee in their need. Hear us, O God, and look in pity upon our manifold necessities, since Thou alone art able to satisfy all our desire.

"Especially do I commend to Thy holy keeping:
 All who tonight are far from home and friends:
 All who tonight must lie down hungry or cold:
 All who suffer pain:
 All who are kept awake by anxiety or suspense:
 All who are facing danger:
 All who must toil or keep watch while others sleep:
 Give to them all, I pray, such a sense of Thy presence with them as may turn their loneliness into comfort and their trouble into peace. Amen."

ize to meet soil test needs in order to get maximum growth and cover.

WE GET a number of requests from farmers who would like to thicken their old stand of alfalfa or clover by broadcasting some seed or top of the field during the early spring. This is about the same as sowing seed on poorly prepared land; the chances of success are equally as poor. In addition, there will be a lot of competition from the old stand of legume and the

weeds. We would discourage this practice in favor of preparing a good seed-bed and make a new seeding.

THE VALUE of liberal amounts of fresh water for all livestock and poultry at all times is very important. As we visit and observe farm operations, we continue to see animals limited on water intake. When we consider that water makes up over 50 per cent of the body tissues and is vital to heavy milk production from cows, every effort should be made to permit free choice at all times. Feed intake may be limited or removed for days at a time without serious damage to the health of the animal;

however, if water intake is removed or limited, tissues become dehydrated and digestion and production are inhibited. For maximum, efficient gains and production be sure that fresh water is

available at all times. GOOD FARM management is very important for success in today's agriculture; this ability often separates the men (Turn to page 3)
