FARM MACHINERY is always worthy of more consideration. When this subject is mentioned at any of our farm meetings, it requires only a few minutes until many folks begin to squirm and look forward to the next subject. Most farm machinery operators feel they are using good safety measures and that it's always "The other Fellow" that is careless. We mention this subject at this time of the year because the field season is just starting and we sincerely feel that safety pays. Most farm machinery accidents are caused by too much speed, and by making adjustments and repairs without stopping the machinery. In addition, we urge all operators to keep small children away from tractors and other farm machinery; In spite of their desire to ride on moving machinery, it is dangerous and has been the cause of many fatal accidents.

THE FERTILIZER of shade trees will increase the growth of the tree and should be done early in the spring. In most cases it is advisable to bore holes into the ground around the "drip-line" of the tree and apply a handful of complete fertilizer (such as

DISCARDED FOOD

Seven to 10 percent of the calories in household food are thrown away, fed to animals, or used for nonfood purposes. This is one finding from a survey that U. S. Department of Agriculture food economists did in cooperation with three State Experiment Stations. The data, from two urban areas and one rural community, indicate that the discarded food totals about 200 calories per day for each person.

10-10-10). The second ring of holes should be made about 12 to 18 inches inside of the first circle and apply additional fertilizer. Soak the area thoroughly with water at weekly intervals for several times after this treatment. On small trees (under two-inch diameter) where the ground is not covered with sod, the fertilizer may be applied on top and worked into the soil.
