yard, north of the borough, was damaged by fire Saturday afternoon, Oct. 10.

Father's Work Is Important

Getting the family to realize that father's work is important to him doesn't need to be a problem, reminds Mrs. Marguerite L. Duvall, extension family life specialist of Penn State University.

When dad can't make it to Junior's birthday party, you can help him to see that dad's interest in his work is really important in his family.

Every father wants to succeed financially and have the prestige and status that go with this success. Perhaps even more important is the satisfaction he gets from using his abilities productively, she says.

Both mother and the children need to understand that father's work is important to him and that he's doing it for them as well as for himself. It's often easy for mother to feel she's neglected, for work does rob her of some of the companionship she so desires.

If father is so involved in his work, which he usually can't share with his wife, it doesn't help for mother to nag and complain. However, husbands need to be aware of the emotional and affectual needs of their wives. It can work the other way — the wife being too eager for her husband to succeed and trying to push him beyond his capabilities.

Another thing a woman sometimes fails to understand is that middle age may be a discouraging time of life for her husband. He may have real concern for thinning hair and career problems.
