by Dr. Geo. W. Crane

Herbert Hoover's simple strategy fooled the Germans and let him smuggle London newspapers into Belgium in World War I. Maybe this same tendency to ignore the obvious is what has held cancer treatment back for 66 years. For we strain to concoct fancy drugs to burn cancer cells, but still 1,000 die daily despite such treatment!

CASE Q-596: Herbert Hoover was Food Administrator during World War I.

Being a Quaker, and highly respected by the Germans, he was permitted to go back and forth from London to German occupied territory.

Some of his aides in Belgium expressed a great desire to see the London newspapers.

So they asked Mr. Hoover if he could possibly bring some copies back.

Mr. Hoover agreed to try.

But when he was ready to leave London, he pondered how he could get the Germans to let London newspapers cross the German lines.

Then he hit upon a possible solution, relying on the fact that people are often fooled by the obvious.

So he carefully packed his suitcase, leaving a pair of rubber overshoes till the last.

Then he wrapped one overshoe in a London newspaper and laid it on top of his clothes.

He did the same for the second overshoe.

When he reached Belgium the Germans immediately pounded on his suitcase and unwrapped the overshoes, carefully inspecting them to see if any secret notes were hidden in any slits in the rubber soles.

Finding nothing, the Germans encased those overshoes in the same London papers, which the Germans had ignored as being merely convenient wrapping paper.

This same tendency to ignore the obvious and seek intricate new drugs, may be what has held up the cure of cancer.

Dr. A. C. Ivy, world famous physiologist, points out that there has been no significant improvement in the TREATMENT of cancer in 66 years!

For back in 1905, we used surgery and irradiation, as by X-ray, and those are the two major forms of attack even today.

But thousands of fancy drugs are being tested in the hope of burning the cancer cells, though this treatment often makes the patient sick and may not lengthen his life-span.

For 1,000 people still die every day in the U. S. from cancer and in our best hospitals!

Recently, surgeons have even begun to debate the wisdom of radical mastectomies, which involve removal of a woman's cancerous breast, plus underlying muscles and the lymph glands or nodes in the adjacent armpit.

It is that our bodies manufacture an anti-cancer substance that he calls Carcalon, which keeps most of us cancer-free in our youth.

But by middle age, our bodies no longer make enough, so tumors develop.

He now treats cancer much as we medics handle severe diabetes. For Dr. Ivy injects enough Carcalon hormone from horse blood to keep the cancer victims healthy, much as we inject insulin to give diabetics a normal blood sugar level.

But both methods are palliative!

So the use of the water-soluble trace chemicals of the ocean may be a more funda-

mental approach, since it may go to the root of the problem. (Always write to Dr. Crane For our glands need trace chemicals to produce their healthful secretions. If we short ration them on raw materials, obviously they must reduce their secretions, maybe to the point of cancer, diabetes, etc.

Study it! After the cornerstone was laid, it took 37 years to dedicate the Washington Monument.
