THE TIMES NEW BLOOMFIELD, PA., JULY 13, 1880.

to remove oil marks from wall

ers in one herd very much alike, and I asked if Blush's heifer was not missing and I went through the herd carefully to look for her. As the cattle walked on my father suddenly called out " Yonder she goes ! I can tell her by her walk .--She moves exactly like Blush." Though this heifer did not so closely resemble her mother in form, she had precisely the same walk; and I doubt if there was an animal in the whole herd that did not have some characteristic in common with its mother. I remember a very peculiar and marked case of recognition of a transmitted character. A blacksmith was shoeing a horse that he had never seen before, and after paring the fore feet and fitting the shoes, asked : " Is this horse a Tuckahoe ?" "Yes," was the reply, "he is a son of old Tuckahoe." "I have shod old 'Tuck, many a

6

time," said he, " and there is the exact counterpart of his forefoot."

This horse did not strikingly resemble his sire in outward appearance, and seemed to have the dispositon of his dam; still, here was a very marked case of inheritance, or the blacksmith, who shod many feet a day, would not have voliced it noticed it.

light chain, fasten it above the knee, let it hang loose, just so it will not touch the floor. If horses kick in the stable, fasten the chain on the hind leg, same way. They will keep quiet while the chain is on, and there is no danger of hurting them. To cure a halter breaker take a half-inch rope a little over twice the length of the horse; make a loop in the middle of the rope (so it cannot slip) pass the horse's tail through it, then pass the ends of the rope through the rings of the halter, and hitch the ends. When he tries to pull, the rope will slip through the rings and all the strain comes on his tail. I have seen several horses broke in this way.

We see so many dishes of hard, dark, watery potatoes mashed, that are almost indigestible. The following method will always produce a good dish : Peel thinly; halve or quarter large ones, but leave small ones whole. Boil until tender, but no longer or they will be dark. Drain off all the water.return the kettle to the fire, mash quickly, season with salt, pepper, cream and butter. Serve hot.

paper where inconsiderate people rest their heads. Take pipe-clay or fuller's earth, and make into paste, about as thick as ice cream, with cold water; lay it on the stain gently without rubbing it in ; leave on all night. It will be dry by morning, when it can be brushed off, and unless an old stain, the grease spot will have disappeared. If old, renew the application.

To Destroy the Cabbage Worm.

The Germantown Telegraph says a certain remedy for the cabbage worm is to sprinkle over the parts of the cabbage plant, where the worm usually operates, a pinch of cayenne or red pepper. Nothing more or less. Keep a few ounces on hand and use it when needed, but use it carefully so as to reach the insect, and it will promptly dislodge it.

Green Food for Fowls.

Fowls in confinement need green food daily. There is nothing which goes so far, is so easily raised, or that they like so well as the tops of the Swiss chard beet. All poultrymen who try the foregoing will set me down as a benefactor for giving this bit of information. The same stuff makes excellent greens for table use.

An old farmer communicates to us the following recipe to prevent wheat from moulding in bins ; "In filling up your wheat after it has been cleaned with the fan, to every three bushels, put in a good hard brick, dried by the sun and be sure it is perfectly dry at the same time you use it. The brick absorbs the moisture that naturally accumulates in the grain, and causes the wheat to become hard and flinty."

Mica, in stoves (often wrongly called "isinglass") when smoked is readily cleaned by taking it out and thoroughly washing with vinegar a little diluted. If the black does not come off at once, let it soak a little.

fullure.

With this Plow will be introduced a corregated Plow Point and Jointer Point, on which we have also obtained a Patent, and which is also a great improvement, both as regards strength and wear.

The Jointer can be shifted so as to take more or less land, and also more or less pitch, and it can always be kept on a line with the Plow.

The wheel will run under the beam or one side of it as desired, and always kept in line. The beam is adjustable for Spring or Fall Plowing, and also for two or three houses. The handles can be adjusted to accommo-

date a man or boy, on the same Plow. It is a perfect Plow. . Wooden beams are poing out of use because they shrink, swell and warp, and never run two seasons allke,

Iron beams are too heavy. Mallcable beams become demoralized and bend, which is much worse than to break. A Stoel beam is the necessity of the day. It is three times as strong and very much lighter than any other style.

When we say a Mold board is chilled, the farmers know it is so.

We do not palm off on them a composition of various metals and call it chilled metal. We want agents for this new Plow in every town in this State. We can give but a very small discount to

them, but we will pay the Railroad Freight. We propose to place this Plow in the hands of Farmers as near the cost of manufacture

It will be the best Asylcultural Implement

It shall also be the chapted.

Persons therefore who are not willing to act as agents on the principle that "a nimble sixpence is better than a slow shilling," need not apply for an agency. No Plows on commission. All sales absolute,

This is the only Steel Chilled Plow In the World.

Steel costs several times more than Iron. But this Plow, full rigged, by giving small discounts, can be sold for Seventeen Dollars. Compare this price with that of any Iron Plow

cover made. It is cheaper than any other Flow now made would be at five dollars and a half. Where there are no agents we will, on re-ceiptof Seventeen Dollars, send a Plow to any Railroad station is the State and pay the feature. Address
