

lished many works in book form. His writings treat mainly in petrography, geology, ore deposits and meteorites, on all of which he is an authority.

MISS HELEN A. SNYDER.

Miss Helen A. Snyder, the new lady principal, comes to us to take, in part, the position held by Miss McElwain, and, in part, the work of which Prof. Grumbine had charge last year.

That Miss Snyder is a woman of experience and of strong preparation for her work is shown by the following. She obtained the degree of Master of Arts from Queen's University, Kingston, Canada, in 1895. Following this she taught Modern Languages in the Iroquois High school and afterward was elected to the lady principalship of the Hamilton Ladies' College, which she held for two years. At the end of this time Miss Snyder went to Europe and spent nearly three years there in study, attending the University of Paris and the University of Heidelberg. At Heidelberg she was the first woman to be allowed to enter the course of Philosophy at that institution. In 1901 Miss Snyder received from the Heidelberg University the degree of Ph. D. with the standing "*Summa cum laude.*"

Since her arrival at "State," by her genial smile and kindly ways Miss Snyder has won a place for herself in the hearts of the students, and her success here is assured.

NORMAN McLAREN TRENHOLME.

Norman McLaren Trenholme, M. A., Ph. D., comes to us this year to take the chair of History, so ably filled heretofore by Professor Becker. Dr. Trenholme was born in Montreal, Canada, in 1874. He was educated in the Montreal High School and McGill University, and at the latter institution became B. A. in 1895, taking First Rank Honors in English and History. After a year of graduate work at McGill Dr. Trenholme went to Harvard as the Edward
